

circuit's insulation and forms a reliable electrical connection. In this regard, Species I is generic to Species II as Species II only shows narrower embodiments of Species I. Similarly, Species I is generic to Species III in that Species III is only intended to show Species I with two deflectable contacts. Finally, Species IV shows a contact module as opposed to the cam with a cover and base in Species I. Applicant believes the variation between Species I and IV is obvious. As Species I is therefore generic to all species, Applicant respectfully requests the Examiner withdraw the species restriction.

Applicant believes claim 1 and the claims dependent thereon are directed toward Species I, II, and III. Applicant believes claims 6 and 7 are generic to Species I, II, III and IV.

Conclusion

An election with traverse was made to the restriction requirement, fulfilling the requirement. Argument was presented to show that the species restriction should be withdrawn. Fees required are included herewith.

Respectfully submitted,

Todd A. Sullivan
